

Fit2Drive™

Driver Readiness Solution

Fit2Drive™: Status Engine

GO (Fit to Drive):

Driver meets all required criteria:

License, medical, MVR, and HOS are valid and compliant.

Conditional-GO (At Risk):

Driver is allowed to operate but has risk indicator:

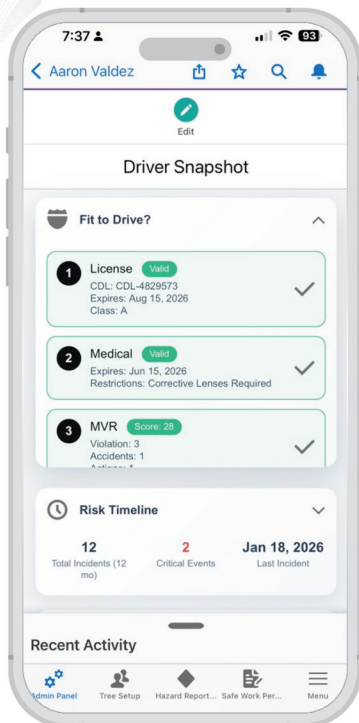

Elevated MVR score, HOS hours issue.

NO-GO (Not Fit to Drive):

Driver is blocked from operating due to a critical issue:

Expired license, medical, exceeded HOS hours and MVR Score is at risk.

Fit2Drive™

How Rhythm's Driver Readiness Enables Supervisors

- 
Identifies High-Risk Drivers Before Dispatch:
 Fit to Drive aggregates telematics events, MVR changes, prior incidents, inspection data, and coaching history into a single readiness score surfacing elevated risk before the shift begins.
- 
Requires Supervisor Review Before Wheels Move:
 When risk thresholds are exceeded, the system forces documented supervisor action, preventing drivers from starting the shift without review, coaching, or restriction.
- 
Converts Behavior Trends into Actionable Intervention:
 Speeding patterns, distraction indicators, harsh driving events, and repeat violations trigger structured workflows turning raw data into required coaching and corrective action.
- 
Prevents Repeat Exposure from Unresolved Risk:
 Open corrective actions, recent preventable incidents, or credential changes cannot silently roll into the next shift Fit to Drive enforces closure before release-to-drive.
- 
Creates Defensible Proof of Oversight:
 Every clearance, restriction, coaching session, and override is time-stamped and traceable, generating documented evidence of governed decision-making for audits, claims, and renewals.

Fit2Drive™

Features-At-A-Glance:

Fit2Drive™ Status Indicator:
Validates whether the driver is currently eligible and safe to operate.

MVR History Timeline:
Displays a chronological view of past violations and accidents for quick review.

Driving License Validation Section:
View license type, number, status, and expiration details in one view.

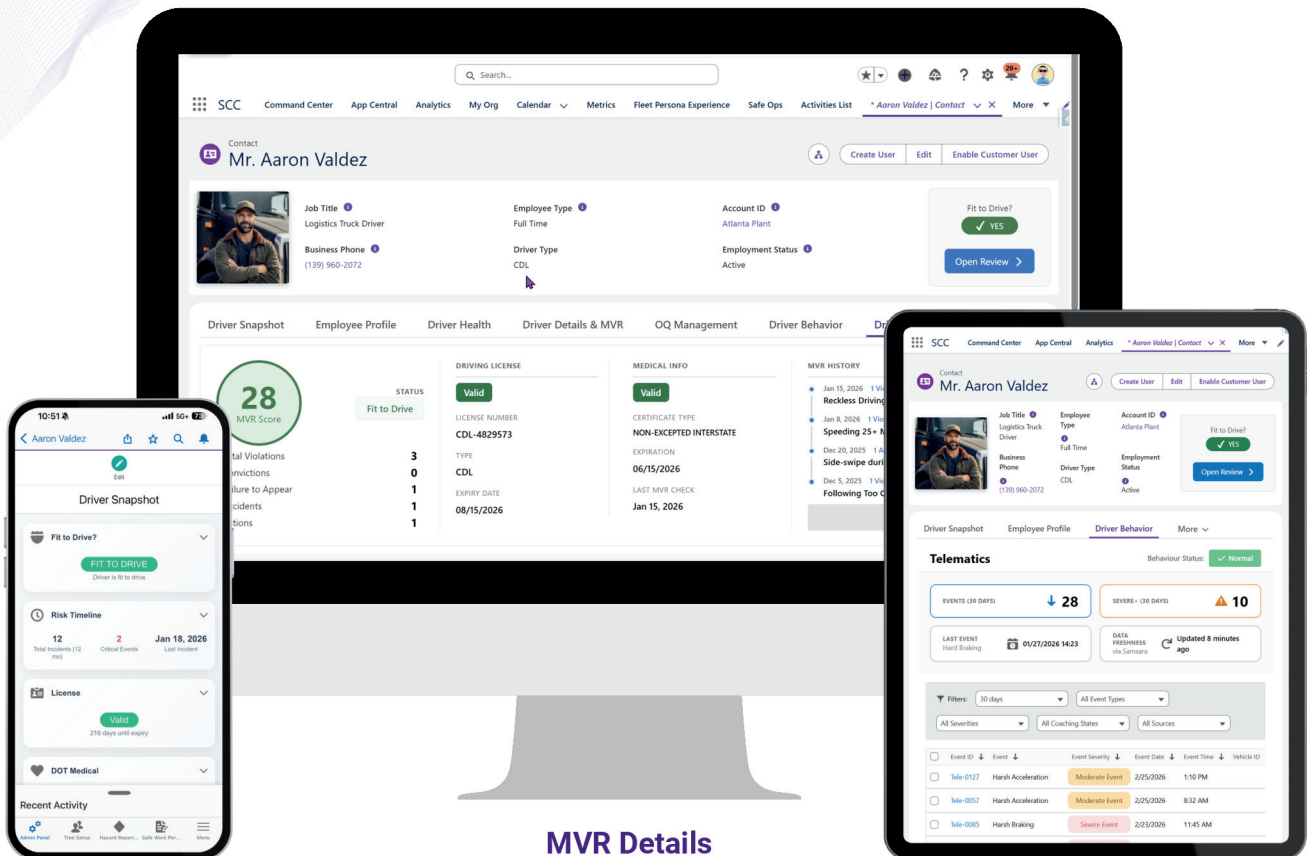

Certification Tracking:
Monitor active, expired, and pending driver certifications for compliance readiness.

Medical Certification Tracking:
Confirms medical certificate type, validity, expiration, and last MVR check date.

Training:
Monitor training to improve driver behavior and reduce risk.
